HL7 AU Project Scope Statement

AU Patient Summary FHIR Implementation Guide

This form is to be completed for new releases for previously published standards or other products, or for reaffirmation, re-circulation or withdrawal ballots (Project Scope Statement only).

A project proposal is not necessary for new releases of previously published standards, or for reaffirmation, re-circulation or withdrawal ballots.

The correct completion of the submitted form will ensure that the Board is presented with all the required information to support their consideration and approval process in a timely manner. The content will provide transparency to stakeholders on the project, expectations, direction and timeframes which in turn will support consensus-based standards development.

Please submit completed forms to projects@hl7.com.au

Project Scope Statement

<table>
<tr><td>Project Title</td><td colspan="6">AU Patient Summary FHIR Implementation Guide</td></tr>
<tr><td>Project Description</td><td colspan="6">The AU Patient Summary project aims to develop and maintain a FHIR Implementation Guide to support the use of patient summaries in the Australian healthcare context.
A Patient Summary is a structured health record extract containing key digital health and administrative data elements, offering a snapshot of a patient's health status at a given point in time. It is designed to support planned and unplanned care, continuity of care, and transitions of care.</td></tr>
<tr><td>Project Need</td><td colspan="6">AU Patient Summary will support the use of patient summaries in an Australian context. It complies with the requirements defined in IPS and AU Core, and sets the minimum expectations on FHIR resources to support conformance and implementation in systems in Australia. This IG is expected to form part of future regulation.</td></tr>
<tr><td>Project Scope</td><td colspan="6">The AU Patient Summary project aims to develop and test the new R1 standard for AU Patient Summary, and take to ballot to be published as an HL7 AU Working Standard (Standard for Trial Use (STU)). AU Patient Summary R1 work will:
Identify and define candidate implementation use cases for the AU Patient Summary FHIR IG, and will collaborate with the clinical community on understanding the clinical workflows involved in the candidate implementation use cases. Australian clinical data requirements are expected to be provided from the Sparked Clinical Design Group.
Identify, develop and prioritise the necessary data, terminology, and interactions that will enable standardised exchange of patient summaries across health settings.
Develop, test, ballot, and publish an HL7 AU FHIR Implementation Guide based on the defined use cases, and data elements.
This FHIR implementation guide will use AU Core and IPS profiles.
This FHIR implementation guide will be informed by, and comply with, relevant international FHIR specifications and terminology.</td></tr>
