HL7 AU Project Scope Statement

AU Core FHIR Implementation Guide

This form is to be completed for new releases for previously published standards or other products, or for reaffirmation, re-circulation or withdrawal ballots (Project Scope Statement only).

A project proposal is not necessary for new releases of previously published standards, or for reaffirmation, re-circulation or withdrawal ballots.

The correct completion of the submitted form will ensure that the Board is presented with all the required information to support their consideration and approval process in a timely manner. The content will provide transparency to stakeholders on the project, expectations, direction and timeframes which in turn will support consensus-based standards development.

Please submit completed forms to projects@hl7.com.au

Project Scope Statement

<table>
<tr><td>Project Title</td><td colspan="6">AU Core FHIR Implementation Guide</td></tr>
<tr><td>Project Description</td><td colspan="6">AU Core uses AU Base and defines the data model and RESTful API interactions that set minimum expectations for a system to record, update, search, and retrieve core digital health and administrative information associated with a patient in Australia. AU Core is intended to promote interoperability and adoption through common implementation. It is intended to be used as-is, or built on top of to support specific use cases and vendor guides. In this regard it is similar in nature to other international FHIR specifications such as US Core FHIR Implementation Guide.
AU Core scope is intended to address:
• Basic patient details
• Basic provider details
• Problems / Conditions
• Medication orders, dispense, administration and usage
• Immunisation history
• Allergies and intolerances
• Diagnostic orders, report, and results
• Vital signs, and other clinical observations
Clinical notes & other patient documents</td></tr>
<tr><td>Project Need</td><td colspan="6">AU Core addresses the minimum expectations for a system to record, update, search, and retrieve core digital health and administrative information associated with a patient in Australia. Providing consistent expectations and requirements for interacting systems and reducing implementation burden. This IG may form part of future regulation.</td></tr>
<tr><td>Project Scope</td><td colspan="6">AU Core R2 will expand on AU Core R1 via a maintenance release through to Working Standard Ballot and Publication. AU Core R2 work intends to:
1. Support active downstream project priorities (AU Patient Summary / AU eRequesting)
2. Incremental enhancement for AUCDI (at least Medication Use Statement data group)
3. Enhance and mature existing AU Core R1 content (via community-raised proposals & AU Core Jiras & Connectathon testing)

AU Core R2 will include new profiles:
• AU Core MedicationStatement
• AU Core RelatedPerson
• Others as raised by community participants / downstream projects (discussed and managed in fortnightly calls)</td></tr>
